

# Preface to the first Issue

## To our Readers

Radiology with its increasing numbers of steadily improving diagnostic and minimal invasive therapeutic methods in combination with the skills of diagnostic and therapeutic procedures in nuclear medicine are meanwhile essential tools on a very high level of patient treatment and care in tight cooperation with the clinicians. Our new Journal (SJORNAM) wants to give the chance for quick online access to new ideas, new scientific research and results in the diagnostic and therapeutic field of Radiology and Nuclear Medicine. With important medical information at the right time in the right place, we tightly feel obliged to pursue patient's health and healthcare. Whether its time pressure in clinic and practice, building a scientific career - with our content for science, training, further radiological training and education in patient care, we would strongly support learning, teaching, radio-diagnosis and therapy, patient orientated, evidence based and independent research. In order to essentially contribute to patient's benefit, we would like to offer healthcare professionals security in their every day work. We want to generate the amount of freedom they need in order to do, whats important to them to start the treatment as very well informed radiologist or clinician about what the progress in radiology and nuclear medicine are able to offer for the patients benefit.
